

The Loop Replacement Sensor for Intersections

An Economical, Effective Advanced Detector

- The stop line solution for failed loops during cold winter months when loop replacement is difficult
- The cost effective, permanent direct loop substitute for intersections in all weather conditions--for new construction or back fit
- Optional wireless homerun provides the perfect sensor solution for intersections requiring advance sensors ("SCOOT"-type control).
- Fast, easy installation with standard relay interfaces keeps traffic flowing through busy intersections with minimal or no interruption
